SUMMARY

Product-minded analyst (MS Data Science, Northeastern) who scopes ambiguous problems into shipped solutions, from an end-to-end web app built from an open-ended stakeholder need, to AI-verification tools deciding what an AI should be trusted to do alone versus where a person needs a deterministic check. Comfortable moving between data work (SQL, Python, Tableau, Power BI) and product decisions: prioritization, stakeholder translation, and defining what success actually means.

PROFESSIONAL EXPERIENCE

EN-NOBLE, Portland, ME

Jan 2026 – April 2026

Business Intelligence Intern

- Identified an open-ended stakeholder need nobody had scoped yet, then independently designed and **shipped a live web app end to end**, a product **still in active use today**.
- Spotted a recurring data-quality gap other teams had learned to work around, then owned the fix end to end using AI coding assistants to accelerate development, **cutting manual reporting effort 30%**.
- Turned **8+ rounds** of ambiguous input from Operations and HR leadership into **20+ structured specs** and self-serve documentation, reducing repeat clarification requests.

Khoury College of Computer Sciences

January 2025 – August 2025

Teaching Assistant, Machine Learning and Data Mining

- Supported **100+ students** in a project-driven ML and data mining course, guiding them through building **supervised and unsupervised models** in **Python** and **SQL**-based data extraction and EDA on real-world business datasets.
- Led office hours and one-on-one sessions for debugging, ML strategy, and project guidance, regularly translating complex technical concepts into plain, intuitive explanations tailored to each student's background.

Hupp Technologies, Ahmedabad, India

March 2023 – April 2024

Junior Data Analyst

- Owned recurring workflows end to end, from source systems to the stakeholder decision on the other side, with **GitLab CI/CD** so nothing shipped untested.
- Iterated on **5 Power BI dashboards (20+ DAX measures)** for **12 cross-functional stakeholders**, treating each round of feedback as a requirements update, not a one-off fix.
- Treated **15+ ad hoc requests** as scoping gaps rather than one-off asks, fixing the underlying dashboards and **cutting repeat requests 60%**.

PROJECTS

Gemini in Sheets : AI Confidence Layer (Product Spec) 🔗

- Diagnosed a trust gap in a live Google AI feature (Gemini in Sheets tells users to verify its output but gives no in-product signal for when to), then specified a deterministic confidence-badge layer with no added model call, a **PRD** and **GTM rollout plan**, and a **North Star / counter-metric pair** sized against a roughly **3.3M-seat** year-one **TAM/SAM/SOM** estimate to prevent the fix from being gamed by a more alarming, less accurate badge.

Insight Bridge : Automated Spreadsheet-to-Dashboard Web App 🔗

- Decided what a full-stack app (**Python/Flask, React, Claude API**) should trust an AI to do versus where a deterministic check was needed; shipped statistical type inference that classifies and visualizes any spreadsheet with zero setup, validated across **8+ unrelated real-world datasets**, and resolved a bottleneck for a **240x speed improvement** (36s to 150ms) on **10,000+ row files**.

AI SQL Auditor 🔗

- Built an automated pipeline using the **Claude API** to review **120 SQL queries** across **15 anti-pattern categories**, then verified each suggested rewrite against real **PostgreSQL execution plans (EXPLAIN ANALYZE)** instead of trusting the AI's confidence at face value, finding only **38%** of AI-suggested rewrites measurably improved performance and **20%** made it worse; visualized category-level accuracy in **Power BI**.

EDUCATION

Masters of Science in Data Science | Northeastern University - Boston, MA

September 2024 - December 2026

GPA 3.5 / 4.0

Bachelors of Information Technology | Gujarat Technological University - Gujarat, India

January 2020 - June 2024

GPA 9.28 / 10

SKILLS

Product & Strategy: Product vision & strategy, roadmapping, market & competitive analysis, go-to-market strategy, OKRs & KPIs, risk mitigation, PRDs & prioritization

Analytics & Programming: SQL, Python, R, statistical modeling, quantitative analysis, Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn, Plotly

BI, Databases & Tools: Tableau, Power BI, Excel, MySQL, PostgreSQL, SQL Server, Jira, Git/GitLab, Notion, Claude, ChatGPT, Cursor
