Boston, MA (Open to Relocation) | (857) 605-9385 | bhaktipasnani02@gmail.com | LinkedIn | GitHub | Portfolio

EDUCATION

Northeastern University, Boston, MA *September 2024 – December 2026*
Master of Science in Data Science | GPA: 3.5/4.0

Gujarat Technological University, Ahmedabad, India *January 2020 – June 2024*
Bachelor of Engineering in Information Technology | GPA: 3.7/4.0

PROFESSIONAL EXPERIENCE

EN-NOBLE, Portland, ME *January 2026 – April 2026*
Business Intelligence Intern

- Automated **SQL and Python** QA checks that flag missing values, duplicate records, and inconsistent formats in reporting data, reducing manual reporting effort by **15%**.
- Scoped and launched a customer-facing **MVP** for personalized discovery of cultural experiences by city and interest, using AI-assisted development; increasing booking conversion from **10% to 65%** over the three weeks after launch.
- Synthesized requirements from **8+ stakeholder discussions** into **20+ workflow specifications** and self-service guides, enabling non-technical team members to interpret reports independently.

Khoury College of Computer Sciences, Northeastern University, Boston, MA *January 2025 – August 2025*
Head Teaching Assistant, Machine Learning and Data Mining

- Led and trained **5 TAs** for a **100+** student ML course, co-designing grading rubrics and office-hour structure that reduced student escalations to the professor by **30%**.
- Analyzed **60+ submissions** in Excel and interviewed **20+ students** to uncover accuracy misuse on imbalanced data; recommended precision/recall guidance adopted by the instructor.

Hupp Technologies, Ahmedabad, India *March 2023 – December 2023*
Junior Data Analyst

- Analyzed **15+** recurring requests to identify dashboard gaps, fixing root causes and cutting repeat requests by **60%**.
- Built **3 Python-based** financial data-processing workflows, integrating transformation and validation with GitLab CI/CD checks to detect errors before stakeholder reporting.
- Standardized KPI calculations through **20+ DAX measures across 5 Power BI dashboards**, enabling **12** cross-functional stakeholders to track trends, compare results against targets, and investigate performance gaps.

PROJECTS

AI SQL Auditor - LLM Evaluation Pipeline for Query Optimization | (Link)

- Built a generative AI pipeline on the Claude API that reviews SQL queries, suggests performance fixes, and verifies each fix.
- Tested **120** real-world SQL queries across 15 anti-pattern categories, validating every suggested rewrite against PostgreSQL execution plans; found only **38%** of AI suggestions improved performance, while **20%** made queries slower.

Live Revenue Risk Check - ML Prediction Tool Using SEC Filing Data | (Link)

- Built and deployed a live tool that pulls a public company's financial filings from the SEC's public API and predicts whether its revenue is likely to decline the following year.
- Trained a Random Forest on 505 company-years using a time-based train/test split to prevent data leakage; achieved **0.62 ROC-AUC** and **34% precision at 50% recall**, vs. 22% precision from random guessing.

Insight Bridge - Automated Spreadsheet-to-Dashboard Web App | (Link)

- Built a full-stack web app (Python/Flask, React, Claude API) that turns uploaded spreadsheets into clean, readable dashboards with no manual setup.
- Validated automatic data-type detection across **8+** unrelated datasets and fixed a major performance bottleneck, improving processing speed **240x** (36 seconds to 150 milliseconds) on files with 10,000+ rows.

SKILLS

Programming Languages: SQL, Python, R
Databases: MySQL, PostgreSQL, Microsoft SQL Server (SSMS)
BI & Visualization: Power BI, DAX, Tableau, Excel
Statistics & Experimentation: A/B testing, hypothesis testing, logistic regression, precision/recall, ROC-AUC
ML & Data Libraries: scikit-learn, pandas, NumPy, SciPy, Matplotlib, Seaborn, Plotly
AI & Dev Tools: Claude API, Cursor, Git, GitLab (CI/CD), Jupyter, Flask, React, Vercel
